

Alexandros Filotheou

I have 7+ years of hands-on experience that includes SLAM, [localisation](#), [autonomous navigation](#), [control](#), [Computer Vision](#), and general integration and problem-solving. These I have acquired in [real conditions with real robots](#) as well as in simulation, working for research projects funded by the European Commission and the Greek State. I have mainly used ROS and ROS 2, but also MATLAB/Octave, all the while under Linux. My primary coding language is [C++](#) and my secondary [Python](#). I hold a [PhD in Robotics](#) and I am qualified with a [Master's degree in Control and Robotics](#). I have deliberately chosen the academic + software engineering path because I wanted to reconcile the two dominant types of engineers: the academic type whose coding boundary is MATLAB, and the software engineering type whose boundary is code. It is my pleasure to document my motivation and contributions in a clear and concise manner that acknowledges my audience's existing knowledge with regard to [code](#), [presentations](#), [technical papers](#), or [tutorials](#). Most of all I enjoy being a member of a team and solving problems. Thank you for taking the time to read this.
