I have 7+ years of hands-on experience in robotics which includes SLAM, Localisation, Autonomous Navigation, Control, Computer Vision, and general integration, problem-solving, and troubleshooting. These I have acquired in real conditions with real robots as well as in simulation, working for research projects funded by the European Commission and the Greek State, or through volunteering. I am proficient in ROS and ROS 2, but also MATLAB/Octave, all the while under Linux, which has been my primary OS since 2008. My primary coding language is C++ and my secondary Python.

I hold a diploma and a PhD in Electrical and Computer Engineering and I am qualified with a Master's degree in Control and Robotics. I have deliberately chosen the academic + software engineering path because I wanted to reconcile the two dominant types of engineers: the academic type whose coding boundary is MATLAB, and the software engineering type whose theoretic boundary remains in code.

It is my pleasure to document my motivation and contributions in a clear and concise manner that acknowledges my audience's existing knowledge with regard to code docmentation, presentations, technical papers, or tutorials. Most of all I enjoy being a member of a team and solving problems together with other people.
